Bachelor Electromobility and Electrical Engineering

Mobility and climate protection are today in our society matters that are no longer a contradiction. We train young people so that you can contribute to it actively to realize innovative ideas in the field of mobility while protecting the environment.

The Faculty of Electrical Engineering and Information Technology offers - currently unique in Bavaria - both an ideal basis for training in "traditional" areas of work such as electrical engineering and information technology as well as in the complementary fields of modern vehicle technology.

Lectures, labs, seminars and field trips will prepare you for your future career as an engineer in one of latest professions of our time. Other skills you can cross-faculty projects, such as Shell Eco- marathon or Formula Student Racing Team purchase. Already, thereby benefiting our students in areas such as project management, marketing, social skills or self-directed learning.

In the world of tomorrow innovators are asked to impress with expertise and passion in the matter. We have made it our mission to provide the knowledge required for this purpose.
