### INDEX

#### Art Education

Bridging Design Education and a Portuguese Handcraft Tradition — Pedagogical Experimentation through Design for Doing
*Jorge Brandão Pereira, Heitor Alvelos, Abhishek Chatterjee*

Challenges in Developing Creative Thinking: Building Visual Awareness and Confidence in University Students
*Ray C. Noll III*

Learn without Learning: Experience of Art Perception in Museum (Experimental Studies at The State Hermitage Museum)
*Tatiana Kharitonova*

Meditation and Art – The Conscious Perception of the Great Works of Painting
*Andreas de Bruin*

Teaching-Learning Experiences in Interior Architecture in the Context of Creative Economy and Socially Responsible Design
*Anne K. Kurjenoja*

#### Business Education

Education in Management of Cybersecurity
*Nedko Georgiev Tagarev*

Options for Deployment of ESS Methodology Components for Contemporary Instruction on Business Research Methods
*Matilda Alexandrova*

The Interrelation between Leaders and Followers Based on the Orientation towards Intrinsic Goals
*Nira Shalev*

#### E-Learning

*Joseph Vancell*

Comparing Student Satisfaction and Perception of Effectiveness in Two Different Online Computer Science Courses
*Waleed Farag, Sanwar Ali, Imran Ghani*
Designing and Sequencing Learning Content for Adult Educators' Competence Development in Open Web-Based Learning

Martin Steber, Sonia Klante

Innovations in Teaching-Learning Methods Applied to Math Courses of New University Students (MATE+)

Mabel Vega, Vanel Lazcano

Learning in Globalized Crisis: Emancipatory Education, Technology and Diversity

Alan Bruce

Let's Play – The Gamification Method in Education

Anna-Maria Markova, Teodora Gechkova

Science & UniReady: Tailoring an Online Preparatory Workshop for Successful University Transition and Academic Performance in Health Sciences

Jacqueline A. O'Flaherty

Student Autonomy and Metacognition in Online Learning

Maria de Fátima Goulão

Education and Multiculturalism

Immigration and Disability as Inequality Intersectional Axes in Education

Mónica Ortiz Cobo, Rosella Bianco

Internationalization of Higher Education in Mainland China: A Preliminary Analysis of Higher Education Models in Guangdong Province

Wei Chin Wong, Yan Siqi, Wan Yuan

Refugee Education: Teachers' Perceptions over Students Learning Difficulties in Italy and Jordan

Rosella Bianco, Mónica Ortiz Cobo

Education and New Technologies

AduLeT Project and its Community of Practice: An Insight into Technology Advanced Use within Higher Education

Victor Gonçalves, Isabel Chumbo, Elisabete Mendes Silva, Maria Raquel Vaz Patrfício

Application of Spreadsheets and Neural Networks for Assessing the Knowledge and Skills of Distance Learning Students

Tsvetan Tsvelkov

Artificial Intelligence as a Disruptive Technology in Education

Vatroslav Zovko, Monika Gudlin
Computational Thinking and Coding for Student Creativity and Innovation Capability
Alden Meirzhanovich Dochshanov

Creating and Developing Communities of Practice in Online Environments: The E-Fer Platform
Rogério Costa, Ana Amélia Carvalho

Deepening Understanding on Pharmacy Practice through Experiencing Virtual Reality and Mobile-Health Patient Application
Vivian Lee, Paula Hodgson

Developing Competences for Making Sense of Online Citizen Reviews in Public Services: An Active Learning Experience with Higher Education Students
Marlene Amorim, Mário Rodrigues, Gonçalo Santinha, Cristina Machado Guimarães

Educating the Gifted in Russian Region: Pilot Study in Udmurtia
Julia Chernenko, Anna Borisova, Arina Grosul

Forming of Data Science Competence for Bridging the Digital Divide
Katia Rasheva-Yordanova, Veselin Chantov, Iva Kostadinova, Evtim Iliev, Pepa Petrova, Boriana Nikolova

Integrating Cybersecurity Labs into Traditional Curriculum Design
Suzanna E. Schmeelk, Denise M. Dragos

Introduction of Emerging Technology into Higher Education Curriculum: The Case of Blockchain Technology as Part of Data Science Master Program
Stefka Toleva-Stoimenova, Dimitar Christozov, Katia Rasheva-Yordanova

MOOCs to Semantic Web Education
Vitor Gonçalves, Bruno Gonçalves, Francisco Garcia-Tartera

Promoting Mobile Learning in the Social Work for Children with Communication Disabilities
Emilia-Maria Sorescu, Gabriela-Eugenia Iacobescu

Self-Driving Cars
Selin Orbay

Self-Video-Based Discourse as a Lever for Developing Pre-Service Mathematical Knowledge for Teaching
Ruti Segal, Yaron Lehavi, Ami Merzel, Ami Baram, Bat-Sheva Eylon

The Flipped Classroom Project: Testimonials from Educators who Made it Work
Anca Colibaba, Irina Gheorghiu, Stefan Colibaba, Mona Chiriac, Rodica Gardikiotis, Cintia Colibaba
The Non-Formal Academy Experience: An Exploratory Model to Develop Students' Competences for Working in International and Virtual Teams
Marlene Amorim, Marta Ferreira Dias, Mário Rodrigues, José Manuel Oliveira, Isabel Dimas, José Rainho, Eva Andrade

Education and Social Inclusion

A 'Classroom as Community' Approach to Supporting Student Well-Being and Reducing Bullying in Primary Schools
Elspeth McInnes, Victoria Whittington, Bec Neill

Arts and STEM for Social Inclusion
Michela Tramonti

Biocentric Education: From Rolando Toro Model to the Paradigm 4.0
Ana Maria Silva, Catanna Nadas

Challenges of Architectural Education in Mexico: Globalization, Peri-Urban Semiotics and Social Responsibilities
Anne K. Kurjenoja, Edwin González-Meza, Melissa Schumacher, Eduardo Gutiérrez-Juárez

Developmental Guidance and Student Acquisition of Social Competence
Hardin L.K. Coleman

Educational Needs in Computing of Experienced Full-Time Working Professionals
Ashley J. Haigler, Suzanna E. Schmeelk, Tonya L. Fields, Lisa L. Ellrodt, Ion C. Freeman

The Size of Government Spending on Education in Iraq and its Impact on the Provision of the Required Study Seats
Safaa Ali Hussein, Ahmed Abdulzahra Hamdan

Education and Special Needs

Academic Self-Concept of Gifted Pupils
Jana Duchovicova, Dominika Hosova

Design and Practice of Social Implementation Education in Engineering Education
Kazuya Takemata, Akiyuki Minamide

ICUMEDA Intercultural Mediation & Art Setting the Stage for Upskilling Pathways in Afghanistan
David Th. Ausserhuber

Non-Academic Self-Concept of Gifted Pupils
Dominika Hosova, Jana Duchovicova
Innovation in Language Learning

A New Way to Learn Languages Online: Language Lab and European Mobility
Valerio Amorese

Phrasal-Quest: Designing a Game-Based Storytelling Approach to Teach English Verbal Multi-Word Expressions
Annalisa Raffone, Francesco Maria Sacerdoti, Sabina Maraffi, Johanna Monti

Meditation and Art – The Conscious Perception of the Great Works of Painting

Andreas de Bruin
Munich University of Applied Sciences, Germany

Abstract

The great masters of painting have themselves revealed that their works conceal exceptional power. To access this potency requires a special approach; the work’s image must be perceived and understood in all its depth. However, today’s museum visits are often characterized by how many works of art can be viewed in as short a period as possible, leaving little time to truly focus on the paintings, or to appreciate them in detail. Many visitors also lack the expertise that might enable them greater access to a painting. To bridge this gap, guided museum tours can be helpful, but the imparting of mere facts about the works in question can potentially create obstacles to one’s personal access, as it excessively directs the process of perception. It’s important that space remains for the image itself to be discovered. Efforts in the field of art education must take these aspects into account.

"Meditation and Art" presents a method that enables conscious perception of the paintings of the great masters. Through concentration and focus, the observer is able to access the inner architecture of a great work of art, complementing the usual technical and historical analysis of a painting. Thus, mindfulness and meditation are effective tools that can add a new dimension to the appreciation and understanding of these masterpieces. This new form of art education includes four distinct parts: (I) walking meditation and silence meditation, (II) describing the image/aspects of a work, (III) an artwork's historical development/stylistic contexts, (IV) final meditation.

"Meditation and Art" was presented for the first time at the Amsterdam Rijksmuseum in 2017. Public workshops, private guided tours as well as university seminars have since been held in several major museums in Europe, and have met with great enthusiasm by participants. This article describes the approach based on a detailed case study.

Keywords: Mindfulness, Old Masters, painting, meditation, museum tour.

1. Introduction

My affairs follow the course allotted to them on high
Albrecht Dürer

It has often been noted that the great masters of both painting and music appear to draw their inspiration from a connection with the Divine. When asked from where he derived his inspiration, the composer Johannes Brahms is known to have said: "Not I, the Father that dwelleth within me, He doeth the works." (Abell 1994, p. 4). In response to criticism from a concertmaster who had complained during the first rehearsal of a new composition that a certain passage for the left hand was too demanding for anyone to play, Beethoven replied: "When I composed that passage, I was conscious of being
inspired by God Almighty." (Abell 1994, p. 3). Mozart, too, saw himself in these "higher spheres". Once asked how he composed, he replied, "The process with me is like a vivid dream." (Abell 1994, p. 6)

In painting, we also find such evidence. A court painter of the Medicis and art historian, Vasari said of Raphael, "With the beauty of its figures and the nobility of its painting, the work seems to breathe the breath of divinity, with astonishes anyone who examines it intently, causing them to wonder how the human mind working with the imperfect medium of simple colors could, with the excellence of design, make objects in a painting seem alive." (Vasari 2008, pp. 315-316)

And it has been said of Rembrandt that the starting point for his work was the "exaltation of his soul" (Némo N/S, p. 16). As noted in the introductory quote of this article, Dürer was also aware of a higher source of inspiration, and expressed that conviction in words he painted alongside the date in his self-portrait of 1493.

According to the great masters of music and painting themselves, their works conceal a special power, and uncovering it requires a special approach. In the case of music, this requires that the listener really listen to the music, consciously, giving full attention to the musical themes, moods and turning points. And when viewing artwork, it's about perceiving and understanding the image, in all its depth. It's extraordinary that, through museums, we have the original painting before our very eyes, just as the artist created it, with the exception of changes or repairs made to the image over time.

Without a filter, it's possible to perceive the manner in which the artist was inspired, and through the use of color, composed.

Museum visits are today often characterized by the fact that in a short period of time, for example on a Sunday afternoon, visitors try to view as many works of art as possible. Some museum visitors occupy themselves with photographing the paintings, leaving even less time to really observe them, and to appreciate them in detail.

Many visitors also lack the expertise that might enable them greater access to a painting. Text panels stating the date the piece was created, and a brief introductory text are not sufficient here. Guided tours of the museum can be useful, but the communicating of mere facts about the works in question potentially creates obstacles to one's personal access, as it excessively directs the process of perception. It's important that space remains for the image itself to be discovered. The Scottish painter Benjamin Creme once said that to know what the picture is about can provide a "way in for the viewer; but to know what a picture is about is not the same thing as to experience the painting." (Creme 2017, p. 13).

During my public workshops and private tours, which have taken place at the Kunsthistorisches Museum Vienna, at the Amsterdam Rijksmuseum, at the Dresden Gemäldegalerie Alte Meister, and as well as at weekly university seminars at the Alte Pinakothek in Munich, I have observed that participants appear to enjoy the short meditative exercises. The "Meditation and Art" approach was presented for the first time through a short presentation and workshop at the international "Museum Guides Now!" Symposium at the Amsterdam Rijksmuseum in 2017.

---

1 See also Némo N/S, p 70.
2 See Dürer's Self-Portrait of 1493, note the adage, next to the date: My sach die gat/Als es oben sacht - which means My affairs follow the course allotted to them on high (see Eichler 2016, p. 19).
3 An excellent way to tap classical music through conscious listening is offered by the international Musicosophia School in Sankt Peter (Germany), www.musicosophia.com
2. Method

Above all, “meditative stillness” plays an important role in the “Meditation and Art” method; this is especially important state to develop before one approach a painting to view it, then while looking at it, and even after viewing it. The silence before and after viewing a picture is achieved through an inner centering, developed for example by the method of concentrating on one’s own breath. The silence during viewing is created by focusing entirely on the different characteristics of the picture. In this way, the viewer enters into an inner dialogue with the image, in which an attempt is made, as far as possible, not to be distracted by rambling thoughts and/or emotions that are not related to one’s perception of the image itself. The merging that results gives us the opportunity to take the entire image in, and to perceive its particular individual charisma, beyond its myriad characteristics.

Part I: Walking meditation and silence meditation

There are specific techniques that can help develop the attitude of serenity, mindfulness, and inner calmness essential to the in-depth consideration of a painting.

Beginning at the entrance to a museum, one should not be distracted by the many impressions and visitors. Here walking meditation can be effective: when we walk toward a picture, we pay attention to our feet and to the steps we take. The more focused we are, the less distracted we are from the objects, people or sounds around us. When we arrive at the picture, we devote our attention to our own breath, for a few minutes, with our eyes closed. Only then, once we are centered, do we take a closer look at the painting.

Part II: Picture description/aspects of a work

The next step entails describing the painting. The following aspects should be considered:\footnote{4 For a brief explanation of various key movements, works, themes and techniques, see Hodge, S. (2018).}

- Color
- Composition
- Light and shadow/brightness/contrast
- Expression
- Technique/painting style
- Shape/figures/items

In small groups, we focus on one aspect of the work, in more detail. Each group is then given enough time to engage with respective aspects discovered. Then, all the groups’ findings are compiled. Afterwards, the groups present their thoughts. These presentations can be supplemented and extended by the other groups as well as the course leader, after each group has presented. Rather than being influenced by historical information about the painting from the very start, participants are encouraged to develop their own approach and perceptions about the painting.

With regard to the aspect of composition, we examine how the artist composed his image; that is, how the colors and shapes are composed in relation to each other, and how the entire surface of the image is allocated. In this way, we can examine in more detail the painting’s central axes, diagonals and the golden section – which induces the greatest possible harmony in the image. The next level of observation examines the
basic shapes; triangles, circles and ovals present in the image. We can then study the free lines in the image. Each artist applies these elements in his/her own unique way.

By examining the aspects of form/figures/objects we can distinguish the elements proportion, materiality(texture) as well as other details. The question considered here is: to what extent are the forms in line with reality? Are they rather simplified, or even completely abstract? For example, are figures displayed in the correct proportions or are they rather distorted? Are the surfaces of the various items in the image, such as clothing, skin, wood and stone, fabric or texture represented differently, or in the same manner?

Part III: An artwork’s historical development/stylistic contexts

After describing the image, the third part of this method considers the work’s historical details; the name of the artist, the year of the work’s creation, its size, the style of painting, its museum location. These details can usually be found on a text panel next to the picture. In order to correctly describe the painting’s iconography – its objects and their respective meanings, as well as its iconology, relating the contents of the entire image to the context of the time, more information on the image and artist is necessary.

During what era was the image created? During which phase of life did the artist create the work? Who inspired the artist in his career? Why did the artist paint his work in this way? What does the artist want to say with his picture?

Part IV: Final meditation

At the end, we conclude our contemplation of the painting with a short silent meditation, in which we try to see the image again, in our minds.

3. Outlook

"I have goose bumps!", said a participant in the Alte Pinakothek while viewing Dürer’s “Selbstbildnis im Petzrock”. "He looks at me with so much calm and strength and somehow right through me!" The other group participants add: "To me, he’s looking sideways!", "No, I think he’s looking at me!", "To me, it’s serenity and eternity!".

In all previous workshops and private tours there were exciting dialogues with participants about the discussed masterpieces. "I’ve never been to a museum", said an over 80-year-old participant in the workshop, who was impressed with this innovative intuitive approach to a painting. "This image, and above all this expression in Rembrandt’s eyes, touched me a great deal". The depth with which he then described his experience of seeing Rembrandt’s self-portrait from 1652 was very moving. That someone visiting a museum for the first time shared such a profound experience, marked a very special moment during the meditation-and-art workshop at the Kunsthistorisches Museum, Vienna in April 2018.

Overall, the participants are always amazed how much there is to discover in a painting. For example, the expressiveness of Rembrandt, the gentle choice of colors in Raphael, the compositions of Veronese or the influences of Mantegna, Bellini and Giorgione on the techniques of Titian, the discoveries are always fascinating. Students who learn to use the "Meditation and Art" approach in the context of seminars and then independently visit museums to view paintings and to share this technique with others,

---

report that they do so with pleasure and curiosity and enjoy expanding their knowledge of certain paintings through guided tours at the museum, and through the internet and relevant scholarly literature. In addition to the different levels of meaning of a work, one also learns a lot about human thought and culture during the respective epochs. But the bottom line is that many participants report that they now look at paintings quite differently; that they have better access to them, and that it has made visiting museums more enjoyable.
